

Stocktake on the venue iPad

Your first count — what to tap, in order. Read it once, then keep counting.

Before you pick up the iPad

- The iPad stays signed in as the **venue's** device. If you see **"Sign in this device"**, stop and grab a manager — that login is theirs, not yours.
- You need your own **4–6 digit PIN**. A manager sets it for you in Alma Staff. Without one you can't count.
- A manager **creates** the count in Alma Stock and **submits** it afterwards. Your job is the bit in the middle: count it and save it.

1 Open Stocktake

Tap **Stocktake** in the menu down the left of the iPad, or the **Stocktake** tile on the venue screen.

2 Say who you are

You'll get **"Who is using the iPad?"** — tap your name, type your PIN, tap **Sign in**.

- Your name is greyed out saying *"PIN not set"* → a manager needs to set your PIN in Alma Staff.
- Nobody is listed at all → a brand new PIN takes a minute or two to reach the iPad. Tap **Refresh** and try again.

Your name then sits in the top right corner. Tapping it (**Switch** →) is how you hand the iPad to the next person.

3 Open today's count

Under **Open** → **Resume a count**, tap the count you've been asked to do.

If it says *"No open stocktakes. Ask a manager to start a new one"*, the count hasn't been created yet. That's a manager job in Alma Stock — there's nothing you can fix from the iPad.

4 Pick an area

You get one card per area — Bar, Cool room, Kitchen — each showing something like **"0/24 counted"**. Tap one and work through it. Finish the area, save, then come back for the next one.

5 Count each line

Every row shows the item, its unit, and what the system currently thinks is on hand.

- Use the **–** and **+** buttons for small adjustments.
- Tap the number to type. It highlights what's already there, so you type straight over the top of it.
- Halves are fine — type **0.5** for half a bottle.

You don't have to type zeros

If there is none of something, leave it blank. Only type a number for what you actually have. Anything still blank when the manager submits the count is recorded as zero.

"Not counted yet" on screen is just your own progress marker while you work — it is there so you can see what you have already walked past, not so you have to go back and fill it in.

6

Save before you move on

Tap **Save draft (12)** — the number in brackets is how many lines you've changed. Greyed out means there's nothing new to save. You'll see "**Saved · drafts updated**" flash up.

Save at the end of every area, and always before you put the iPad down or hand it to someone else.

7

That's your part done

You can't submit the count, and you're not meant to. A manager checks it against what was expected and locks it in from Alma Stock. Tap **Areas** to go back, or just leave it — your saved numbers are waiting for them.

When something looks wrong

Everything says "Not counted yet" again

That tag and the progress bar only track *this* sitting on *this* iPad. Reload the page or come back later and they reset to zero. **Your saved numbers are still there** — open a line and you'll see them. Where you can, finish an area in one go.

Two people, two iPads, same count

Don't. Saving sends the *whole* count back, not just your area, so the last iPad to save overwrites the other one's work. One iPad per count — split by count, not by area.

You typed 300 instead of 3

Just retype it and save again. Nothing is final until a manager applies the count.

A red error line with a Retry button

Tap **Retry**. If it keeps failing, check the iPad is on the venue wifi.

"Sign out device"

Never do this mid-count. It warns you that unsaved drafts will be lost, and it means it. To change person, use **Switch** → in the top right instead.

For the manager — the other half, in Alma Stock

Staff count on the iPads; everything else happens on a laptop in Alma Stock → **Stocktake**.

- **New stocktake** — name it, set the venue and date, and either start from a template or take the full count of every active item.
- Staff count it on the iPads and save drafts against that same count.
- **Submit for review** — this does *not* move stock. It just marks the count ready.
- **Apply count to stock** — the one that counts. It asks you to type **APPLY COUNT**, then updates on-hand balances and writes the movements. It can't be run twice and isn't bulk-reversible.

Only Admin and Manager accounts see those buttons — anyone else gets "*Manager required*" and "*View only*".
