

Stocktake on your own login

Counting in Alma Stock from your own account — what to tap, in order.

Before you start

- Sign in at **alma-stock-v18.web.app** with your own Alma email and the password your manager gives you.
- A laptop or an iPad browser is far easier than a phone for a long count — it all works, but you'll be scrolling a lot on a phone.
- **A manager starts the count; you count it.** Starting a stocktake, submitting it and applying it to stock are all manager jobs — your part is entering the numbers and saving them.

1

Sign in

Go to **alma-stock-v18.web.app**, enter your **Email** and **Password**, tap **Sign in**. If it won't let you in, **Forgot password?** emails the office.

2

Open today's count

Tap **Stocktake** in the menu, then find today's count in the list and press **Count**.

- No count in the list → a manager hasn't started one yet. Ask them to; you can't start it yourself.
- The button says **View only** → that count has already been submitted or locked, so it's closed for counting. A manager can reopen it.

3

Set the screen up before you count

Two toggles sit above the count lines. Both are worth using.

- **Blind count** — hides what the system expects to be on the shelf, so you write down what's actually there.
- **Walk by area** — orders the lines by location, so you do the bar, then the cool room, then the kitchen, instead of criss-crossing the venue.

Categories start closed. Tap a heading to open it — each one shows **"4 of 28 counted"** so you can see what's left.

4

Count each line

Each row is **Item · Label · Qty · Unit · Location**. Type the count into **Qty**. The **Unit** beside it is what you're counting in — bottles, kg, each.

Underneath the row the screen prices your line as you go. If it warns you about the unit, or says one line is most of the whole count, take it seriously — it's catching a units mistake while you're still standing in front of the shelf.

You don't have to type zeros

If the shelf is empty, leave the Qty blank. Only type a number for what you actually have — counting three hundred lines is slow enough without typing a zero next to half of them.

Every line still blank when the count is submitted is recorded as zero. Until then blank just means you have not got to it yet, so saving a half-finished count can never wipe a shelf.

- 5

Save as you go

Tap **Save draft** at the end of every area, and any time you stop. Nothing is kept until you do — close the tab without saving and that stretch of counting is gone.
- 6

Tell your manager when it's done

That's your part. You won't see a submit button — the screen says *"Save draft keeps your counts. A manager submits the count and applies it to stock."* Save one last time and let them know the count is finished.

When something looks wrong

The button says "View only"	That count has been submitted, reviewed or locked, so it's closed for counting. A manager can reopen it if there's more to add.
"Manager required" on New stocktake	Expected — starting a count is a manager job. Ask them to create it and it will appear in your list.
Two people on one count	Don't. Saving sends the <i>whole</i> count back, not just the lines you touched, so the second person to save overwrites the first one's work. One person per count — if you want to split the job, make it two counts.
You closed the tab mid-count	Everything since your last Save draft is gone. It's the only thing that keeps your numbers, so save often.
"Applied stocktakes cannot be edited"	A manager has already applied that count to stock, so it's locked. Start a new count, or ask them to reverse it.
An item isn't in the list	Add line at the top right of the count, then pick the item from the picker.
"unit 'ml' ≠ bottle"	You've typed a different unit from the one the item is costed in. Check it against the parent product before you move on.
"\$12,400.00 — 62% of this whole count"	Almost always a units mistake rather than a real number. The message even tells you what your count would come to if you meant the other unit.

For the manager — finishing the count

- **Submit for review** only marks the count ready. It does not move stock.
- **Apply count to stock** is the one that counts. It asks you to type **APPLY COUNT**, then updates on-hand balances and writes the movements. It can't be run twice and isn't bulk-reversible.
- **Export CSV** on any row downloads counted-vs-expected variance if you want to check it outside the app.

Only Admin and Manager accounts see those buttons, and only they can start a count. Anyone signed in can enter counts on a count that is open — once you submit it, it closes to them until you reopen it.
